**First, you need to solder the kit set. Play with it in this & make it play it.**

Each bingo card contains a random arrangement of 6 numbers ranging from 1 to 38.

A random number will appear in the circuit after the button is pressed. If the same number is on your card, X the number on your card.

The Electronic Bingo kit is a simple make it & THEN play it kit. There are no restrictions in the age and this game is also popular between old people. And you must simply mark this number in your card when the number is generated by the game master. The person who has marked all the numbers in its card first yells "bingo" and this person wins! As you see, the rules of the bingo are very simple, so almost everyone can play this game.
