

LEARNING EXPERIENCES IN INDUSTRIAL ATTACHMENT

There were quite a number of our MS colleagues who went on a one-month Industrial Attachment this year. Let's find out their experiences and what they have learnt!

"My IA @ AISG was an eye-opener to the world of Natural Language Processing (NLP). Despite WFH, I had opportunity to work on state-of-the-art algorithms in NLP and their application on South East Asian languages, in particular for Bahasa Indonesia, Thai and Vietnamese. The learning curve was steep, but the experience has been immensely rewarding."

By Yanto

"Working together with TTJ Design & Engineering, we have the opportunity to understand the industry's needs in digitalization, and try to provide solution using our expertise."

By Tang Xingyu

"I learned the AI edge platform from Transwarp, and developed PPE detection models on the platform for external customer."

By Zhang Xiaoming

"It was a good learning experience during my 1-month Industry Attachment (IA) at the ITE in Sep/Oct 2021. I met up with ITE lecturers, creating opportunities to share different pedagogies and exchange teaching experiences with one another. I also conducted a sharing session with ITE students at their College Central campus and observed how Math lessons are delivered at the ITE. Catch me in action [here](#)."
