

# YEC -Electronic Wheel

## How to play the game?

A player begins the game by pushing the button switch, which will cause Light Emitting Diodes (LEDs) to turn on and off in a sequential manner. Upon releasing the button switch, LEDs will continue to turn off and on for a while. Eventually, only one LED will remain lighted up at a random location on the wheel. That particular lighted LED could represent a number, tagged to a question or a prize. To continue with the game, the next player pushes the button switch, resulting in the same process to happen. Wheel of Fun is a simple and interesting game suitable for all ages.
