“

I was planning to enhance our team capabilities in AI and Data Analytics and chanced upon this course.

The **Best-in-Class In Artificial Intelligence – AI Lead** allowed me to better prepare myself and gain knowledge on the latest developments and trends in AI technology. I found the course very fruitful and enjoyable. The overseas learning journey to China was well organised, informative and provided us good opportunities to visit and network with top AI companies, as well as attend the 25th Annual China Hi-Tech Fair.

This is a good partnership between **Singapore Polytechnic** and the **Singapore Chinese Chamber of Commerce & Industry** to marry domain knowledge and know-how from an educational institution with opportunities to drive corporate and industry transformation. I look forward to potential new opportunities to work with SP on projects to achieve the goal of uplifting my team in AI and Data Analytics.

”

“

Attending the **AI Lead** has been a pivotal experience for me. My primary objective was to delve into the realm of cutting-edge technology and understand its potential contributions to my company and our product innovations. The programme didn't disappoint.

One of the standout highlights was undoubtedly the **overseas study trip to Shenzhen**, where I had the privilege of visiting **top-tier AI companies**. Engaging with industry leaders provided invaluable insights into market strategies and emerging trends, crucial for shaping our own trajectory in the field.

The collaboration between **SP** and **SCCCI** is commendable. It's heartening to see educational institutions and trade associations joining forces to amplify learning and development opportunities. Such partnerships are instrumental in keeping Singapore abreast of rapid technological advancements, empowering us to lead on the global stage.

Looking ahead, I anticipate exciting prospects to collaborate with **SP** on AI and data-related projects post-programme. The **journey with AI Lead** has not only broadened my horizons but also instilled confidence in our ability to navigate the dynamic landscape of AI innovation. I'm eager to harness these newfound insights to drive meaningful change within our organisation and beyond.
